

How to Use the CBT Software

Practice Exams for the California Seismic Principles Civil P.E.
Examination

How to Use the Book and the Software

The book contains three sample exams of the California Seismic Principles examination that simulate the actual exam with its latest format started with the October 2012 cycle.

The intent of the practice exams is to measure the candidate's readiness. Based on this practice, the candidate can assess his/her understanding of the subject matter and plan further review, if necessary.

You should only take the three practice exams after you are fully prepared and have reviewed and mastered the fundamentals of the exam topics. Do not consider taking the exam as a studying tool, rather it is a tool to appraise your knowledge, skills and speed before the actual examination. As such, you should be ready to take the three practice exams as close as possible to your exam date, but with leaving adequate time to adjust your preparation and further study the areas you deem necessary to review.

You will benefit the most by simulating the actual exam conditions and constraints while taking the practice tests. Use the same calculator that you will be using during the actual exam; be ready with your water bottle; start the two and half hours uninterrupted, are among the examples of a real simulation to help you best prepare.

The practice exams are presented in both text manuscript and Computer Based Test (CBT) format. The CBT format is presented in either "Simulation Exam" format or "Exercise Exam" format.

The practice exams text manuscript are presented for those who prefer to exercise the traditional way and also as printed reference materials you may want to take with you to the actual exam.

The practice exams text manuscript are presented for those who prefer to exercise the traditional way and also as printed reference materials you may want to take with you to the actual exam.

However, the most recommended tool to consider is the Computer Based Test (CBT) format presented herein. Use the CBT "Simulation Exam" format to practice and test your knowledge for the three practice exams.

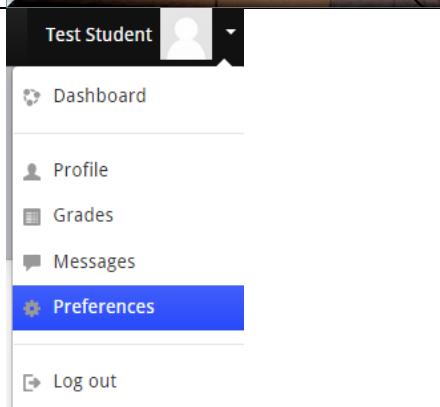

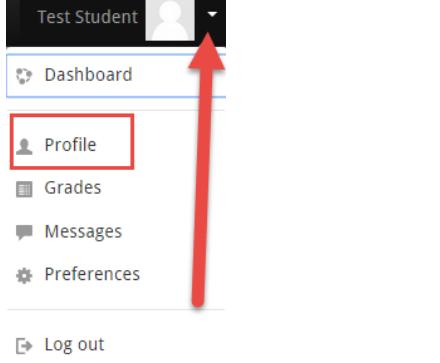

- When you complete one exam, a scoring number (out of 55) is shown on the screen. The navigation pane shows the 55 questions with the candidate's correct and incorrect answers, using color coding: green for correct and red for the incorrect questions. A chance to review the exam questions and check the answer you chosen is possible by selecting the question number. A Scoring Table showing the correct answers and the topic of the question at hand is presented in the book manuscript printable format.
- A review option is available to assess your performance in the particular attempt of the exam. Using the review button, you can go over the 55 exam questions in sequence to see which questions, you solved incorrectly, guessed, flagged or did not solve at all.

- To check the answers to the questions you missed, or to re-visit any of the questions, you may use the CBT "Exercise Exam" to specifically reach and re-solve these questions. The Exercise Exam format will give you the solution to the question if you choose the incorrect answer.
- The provided solution details the major steps with reference to the appropriate code equations and interpretation.
- Alternatively, you may check the correct answer and solution to any question of the three practice exams using the text manuscript.

After taking the practice exams, you will be able to identify your areas of strength and areas of weakness. Study and further prepare yourself on those areas of weakness and the questions that you guessed. The exam results are tabulated with your answer, the correct answer and the specific topic of each question, so as to guide you in this regard.

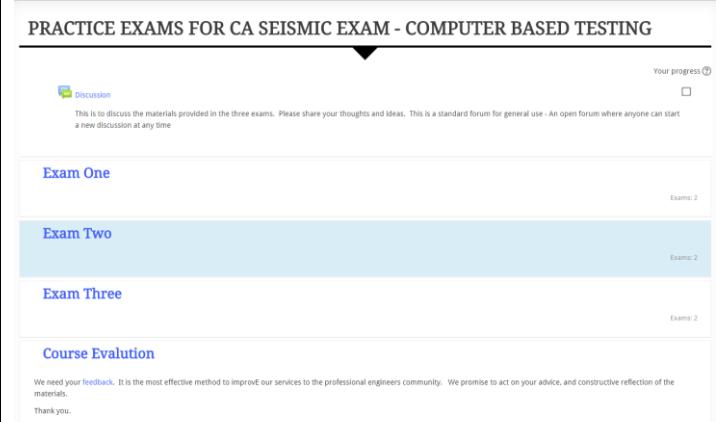

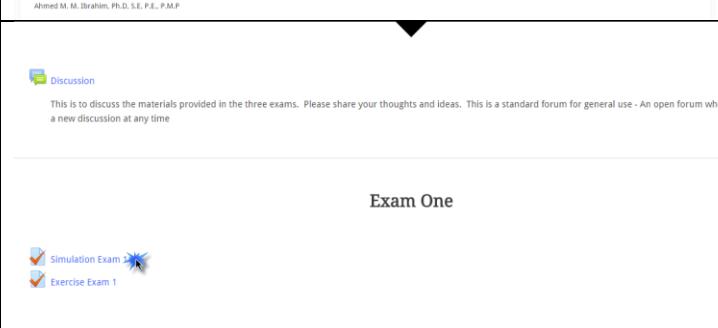

Testing yourself repeatedly close to the actual exam time, is a sure thing to improve your chance of passing the seismic exam. As a result, you will be far better prepared and will improve your performance on the actual test

Login, Change Password, and Update your Profile

URL for login	https://eet-usa.org/classes/login/index.php
	When subscribe for the online CBT, you will be provided a username and an initial password through the system admin. You will be asked to change your password after your first login. You can also re-set your password through " <u>Forgotten your username or password?</u> " feature.
	Click on the dropdown menu at the upper right corner; then click on Preferences.
TEST STUDENT Preferences User account <ul style="list-style-type: none"> ■ Edit profile ■ Change password  ■ Preferred language ■ Forum preferences ■ Editor preferences ■ Messaging 	Select Change password
	Once you are in the system, change your password and profile as needed. The menu to do so is located at the upper right corner of the screen, as shown here

Question 1
Not complete
Flag question

Which of the following equations is used to calculate the seismic design force for nonstructural components (F_p)?

Select one:

A.

$$V = \frac{S_{DS}}{\frac{R}{I_s}}$$

B.

$$F_p = \left(\frac{S_{DS}}{R} \right) \cdot W_p$$

C.

$$F_x = \frac{S_{DS}}{\sum I_s}$$

D.

$$V = \frac{FS}{I}$$

D.

$$V = \frac{FS_{DS}}{R} \cdot W_p$$

Your answer is incorrect.
The correct answer is

The seismic design force for nonstructural components (F_p) is determined from ASCE 7 (13.3-1):

$$F_p = \frac{0.4 a_p S_{DS} W_p}{(R_p / I_p)} (1 + 2 \frac{z}{h})$$

Upper and lower limits of F_p are given by ASCE 7 (13.3-2&3):

$$0.3 S_{DS} I_p W_p \leq F_p \leq 1.6 S_{DS} I_p W_p$$

Where:

The exercise exam format is the same as simulation, except we have add a “check” button”. Once you selected an option {A, B, C, or D}, you can check if the answer is correct. If the answer is NOT correct, a details explanation will be shown at the bottom of the page,

Suggested Practice Exams Schedule for the 3 Exams

- Solve in the last 10 days before your actual exam.
- Start with Exam 3 (Tricky, 8- 10 days before your actual exam.)
 - Simulation Exam: practice within uninterrupted 2.5 hrs
Review to know questions you missed and their topics
 - Exercise Exam: solve individual questions that you missed or guessed
- Solve Exam 2 (Lengthy, 5- 7 days before your actual exam.)
 - Simulation Exam: practice within uninterrupted 2.5 hrs
Review to know questions you missed and their topics
 - Exercise Exam: solve individual questions that you missed or guessed
- Solve Exam 1 (Appropriate, 3 or 4 days before actual exam)
 - Simulation Exam: practice within uninterrupted 2.5 hrs
Review to know questions you missed and their topics
 - Exercise Exam: solve individual questions that you missed or guessed
- REPEAT AS NECESSARY (Minimum Score : 40)
